Vision To Visuals

War Games

Global conflicts haunt the reflections of dolls' eyes in a powerful new project By Baldev Duggal

Lydia Venieri

Lydia Venieri is a Greek visual artist whose current project "War Games" seduces you by the innocence of a children's doll portrait. But upon closer inspection, the eyes of these dolls convey nothing of the innocence of childhood play. Rather, they communicate the bitter taste of conflict. By creating portraits of children's dolls and mixing photographs of the wars that permeate today's news into the eyes of those dolls, Lydia has created a series of images that powerfully document how con-

flict might be perceived by tomorrow's generation—today's children.

Lydia first visited us at Duggal when a client of hers was looking for a frame for one of her 3-D images. "I quickly realized that once I knew what I wanted, I was sure to find it there," recalls Lydia. "Duggal's lab inspired me to find the definition to my ideas."

When we later met and she discussed her project with me, I was eager to learn how she originally conceived of this project. "The image of the reflec-

tion in the eyes dates from my teenage diaries," she explained. "Back then, I would often finish my day's entry with a drawing of my forehead and my eyes with a daydreaming expression that reflected my thoughts and images that symbolized my moods. For example, a boat with open sails represented escape, and a snowstorm symbolized my desire to hibernate."

The power of the imagery in "War Games" is in the eyes of the dolls. "My eyes become our eyes, and we are these

VISION TO VISUALS

dolls," says Lydia. "In between the two subjects, the doll and the war scene, there's a huge unseen barrier of different dimensions of existence, which is impossible to cross over. I have dreamt what it would feel like to reach across and see the difference between what is reality and what is life. That inability to reach the other side makes me, the artist, feel like a ghost."

Before I could even begin to fathom how we at Duggal Imaging could help her, I had to have a better understanding of her technique.

"When I initially began thinking about this project, I was looking for a medium that could project a strong feeling of reflection," says Lydia of the process. "At the same time, I was searching for a material that would allow my digital artwork to last. I acquire my portrait images of the dolls' eyes by using a Canon G5 digital camera. The war images are acquired from public domain resources. I often try to contact the photographer who took the image of a particular conflict. I then manipulate those images into the eyes of the doll portraits in Photoshop and make prints at sizes ranging from 40x20 inches to 60x30 inches."

Once I grasped the concept of what Lydia was trying to communicate, I instinctively knew which material would lend itself perfectly for her art: archival inkjet on poly satin.

"I visited Duggal Imaging because I knew that Mr. Duggal would present me with a large variety of materials to choose from," says Lydia. "I also knew that if there was something new, he'd have it. And when Mr. Duggal showed me the satin material, I immediately knew that this was what I was looking for. In the end, it was the material that helped define my ideas. And Mr. Duggal's studio inspires me with new definitions for my work."

Everyone at Duggal Imaging treasures the opportunity to help an artist realize his or her creative vision. We like to think that we're the perfect com-

DIGITAL LENSES

DIGITAL 6.8/210 T-32° MC

UNSURPASSED RESOLUTION... UNLIMITED POSSIBILITIES

With resolution beyond even the best digital backs, only Schneider Kreuznach Digital view camera lenses have the resolving power to project uncompromised image data onto the high-megapixel chips of today – and tomorrow. Unlike film lenses that are simply relabeled as “digital,” Digital lenses are optically corrected for the highest digital performance. With fifteen standard and macro

Digital lenses to choose from, we offer focal lengths and shutter combinations to cover all of your high-end imaging needs. Resolve to be the best, with superior Digital lenses.

IMAGE CONTROL

For filters as good as the finest lenses, use only B+W.

Even the highest-resolution CCDs and sharpest lenses are only as good as the filters you use. German-made B+W filters are diamond-cut from clear optical glass, precision ground, polished and tested to perfection. Our two-sided Standard Coating or optional Multi Resistant Coating (MRC) suppresses lens flare and increases light transmission. B+W filters offer image control solutions with the optical quality that helps capture absolutely stunning images in camera, eliminating the drudgery of computer retouching.

For richer, more saturated colors and reflection control, B+W polarizers are unsurpassed...and for protecting your lens without compromising the image, our UV filters are clearly superior. We even offer Slim Line filters that eliminate vignetting with wide-angle lenses.

Achieve exceptional in-camera images by using the world's best filters.

VISION TO VISUALS

plement to their design objective. Once Lydia and I realized what material would work best for her, it freed her to focus solely on her creative concepts.

“Having lived with the work for ‘War Games’ on a daily basis, I continually see new reasons for this match between my images and the satin material,” says Lydia. “The satin material not only allows the dolls to communicate the fine expression of the reflection, it also gives it a kind of immateriality. The image of the dolls with the luxurious tender fabric and the silky look of their eyes creates a strong conflict when one discovers the war scenes within them. The viewer’s feelings change in an instant. It’s the shock of a candy that turns out to be a bitter pill.”

The titles of her work cover the range of conflicts that have and are currently affecting the world today: “Baghdad,” “Mogadishu,” “Nagasaki,” “Gaza,” “9-11.”

Lydia Venieri is currently represented by the Stefan Stux Gallery (www.stuxgallery.com/www/index.php?content=page_content_artists_3355086124665a22430906.xml) in New York. They first showed her images at Art Basel and Scope. The first series of her images was printed at 40x20 inches here at Duggal and shown at FIAC 2006 in Paris (www.fiacparis.com), Art Chicago (www.artchicago.com) and Art Athina (www.art-athina.com).
